

# ENTERPRISE WAKE

## OVERVIEW

### REDUCE YOUR RISK BY ACHIEVING 99%+ PATCHING SUCCESS WITH ENTERPRISE WAKE FROM VERDIEM

Verdiem's market leading enterprise wake capabilities allow you to ensure that your PC fleet is always ready when you need to push patches, updates or affect other maintenance activities.

Our products deliver a 99%+ success rate in waking up PCs (either on-demand or via scheduled events), reducing IT labor and costs while streamlining the administration of endpoint devices. Effective patching means that your environment stays secure.

### WHY IS WAKE IMPORTANT

# THE EVOKEIT SOLUTION

Verdiem makes management of distributed PCs easier for IT managers.

## Enterprise-class

Our solution delivers best-in-class enterprise wake that is scalable across organizations of all sizes. Improve patch rates, bring organizational standards to the management of endpoints, and manage your fleet better through Verdiem's industry leading endpoint analytics.

## Improve end user experience

End users will no longer have to wait for their machine to run updates or virus scans during the active workday. With the EvokeIT software solution from Verdiem, those activities can be executed after hours to insure that PCs are available to end users when they need them.

## Simple and cost-effective

The EvokeIT software solution is inexpensive, easy to deploy, and will dramatically decrease IT costs associated with the administration of your distributed PC fleet. Further, Verdiem delivers power savings that will drive a measurable ROI in only a few short months.

## Plugins to desktop management systems

We make administration of our software easier by providing plugins to common systems management products like SCCM.

We use Verdiem to manage around 30,000 PCs. One big benefit is that end users don't have to wait for their computers to install updates and reboot multiple times during a work-day. Antivirus Scans are also huge because complete scans can be done in off hours rather than when the users are working. This has dramatically reduced IT overhead and improved our end user experience.

**Lara Allsopp**, Technical Specialist, IBM Canada

...because Verdiem allows us to remotely wake PCs with a simple website, we've actually solved a major help desk and support problem that we've had. People are actually able to turn their PCs on from home remotely and then able to do work off-line off-hours. This was a very unforeseen benefit.

**Ryan Harvey**, Manager Design and IT, University of Pittsburgh Medical Center
